Proven solution for the Container Handling Industry

REALTIME BUSINESS SOLUTIONS

Company profile

Realtime Business Solutions (RBS) specializes in the development of software applications for the Container Handling Industry. The principals and staff have many years experience in software development and have worked exclusively in the Container Handling Industry for the past 15 years. During this time RBS has provided consulting service to the Shipping and Rail Container Handling Industry, developed highly specific State-of-the-Art software for the Container Handling Industry and has carried out the installation of 'Terminal Operation System' software in 24 Container Handling operations in Australia, New Zealand, Taiwan, Japan, Indonesia, Panama, Romania, Italy and Egypt. RBS is currently preparing to install its software in terminals in Germany

Power and features from consolidated design and experience

The TOPS package is the most advanced package available to the Container Handling Industry today and it is the package of the future. We have had the advantage of developing TOPS over the past years using the latest technology. RBS uses Object Oriented Design and true Client / Server implementation on the most reliable Open Architecture operating system SUN Unix, Linux and also Window servers. The front-end (client) user interface runs on the most popular and low cost Microsoft Window environment.

This single platform/server architecture is a major advantage in the decision making of the optimization process for the nomination of the next move at a minimum cost of time, which brings efficiency and smoothness to the terminal operation.

TOPS is designed from the full operational spectrum. It is based on the concept of the terminal as a whole and breaks it down into smaller integrated components. Therefore, it can identify the most critical part of the operation and the outcome is the most practical solution to accomplish complex operational tasks in a simple manner.

TOPS Summary

Proven hi-tech State-of-the-Art solution for the Container Handling Industry :

- Realtime networked graphical container planning, monitoring and control system
- Equipment control with radio frequency mobile data terminal communications
- Vessel, gate, truck, rail operation, CFS and backend processing
- Billing and management reporting
- Internet access facilities

For operation in :

- Marine container terminals
- Rail container terminals
- Inter-modal container terminals
- Container depots

Technology

- State-of-the-Art open architecture
- Client/server environment using the best of “both worlds”, Unix server and MS Window client
- Realtime networked architecture - Allows all users to access the same information at the same time
- Integration - unlimited system and network integration
- Ease of Use - true GUI interface and easy to learn with on-line help
- Look and feel - can be customized to suit any user’s needs from screen colours to window management and also supports multi-languages
- RDBMS - Oracle or any other database
- Reliability required for mission critical 24 x 7 operation
- Scalability - allows for any future expanding operations (limited only by the hardware configuration)
